CHAMBERS'S

TWENTIETH CENTURY DICTIONARY OF THE ENGLISH LANGUAGE.

PREFACE.

In view of the extraordinary progress which has been made in the historical study of the English Language, it has been found necessary to prepare an entirely New Edition of this Etymological Dictionary. It is confidently hoped that the improvements, which are the result of a careful and exhaustive revision, will greatly increase its efficiency and popularity. The Vocabulary has been enriched by the insertion of a multitude of additional words. The definitions of scientific terms have been carefully verified; and the pronunciation corrected in accordance with the best authorities. The changes in Etymology alone are so great as almost to constitute it a new work. For greater convenience of reference, the arrangement of the words has been made strictly alphabetical throughout.

The Dictionary is intended as a guide in the study and practical use of the English Language; and embraces the MEANINGS of Words, their PRONUNCIATION, and ETYMOLOGY.

The Vocabulary contains every English word sanctioned by good authority, with the exception of obsolete and very rare words, and terms exclusively technical. It includes, however, all the obsolete words that occur in the Bible, the Apocrypha, and the Book of Common Prayer. Owing to the wide diffusion of scientific knowledge and the application of scientific discovery to the business of every-day life, many terms that were once purely technical are now entering into the current speech. From this class of words large additions have been made to the Vocabulary.

In the **Definitions** the current meaning of a word is usually put first. It is left to the Etymology to connect the present meaning with the root. But where the word still retains more or less of its original force, the Editor has endeavoured to increase the vividness of the definition by indicating the radical idea in italics. It has been the aim throughout to avoid a distracting multiplicity of definitions—not to pile up unnecessary distinctions, but to emphasise only the real differences in the usage of words.

The Pronunciation is exhibited in the simplest possible manner. The correct sound of every word is given by being written anew phonetically, thus obviating the use of a confusing array of marks. The accentuation has also been carefully attended to, and different pronunciations have been given in cases where authorities are divided.

In the Etymological part of the work the results of the latest philological research are presented, though necessarily in the briefest possible way. Each word is traced to its origin, whether as belonging to the oldest known form of English, the Anglo-Saxon, or introduced from some sister Teutonic speech, as the Dutch, or borrowed from the classical tongues, either directly, or through the French. Cognate words in other languages, though not in the direct line of descent, are inserted, especially when light is thereby thrown on the primary sense of the word. In thus tracing words to their origin, the aim has been to show that the study of language is one of the greatest interest, that every word has a life of its own, and is not an arbitrary and meaningless thing, but the result of laws of historic growth. It will be seen also that words throw no little light on the history of the men that formed and used them; and that our vast and complex vocabulary can be traced to a few roots expressing the simplest ideas.

In this department full advantage has been taken of the best French and German works, as also of the labours of the new English school of philologists, who have done so much during the last twenty years to promote the historic and scientific study of our own language. Special acknowledgment of indebtedness is due to Diez, Etymologisches Wörterbuch der Romanischen Sprachen (4th ed. 1878); to Littre's great work; to the Deutsches Wörterbuch (3d ed. 1878) of Weigand, one of the continuators of Grimm; and above all to Prof. Skeat, whose Etymological Dictionary is indispensable to every scientific student of the English language. Great assistance has also been obtained from the Etymologisches Wörterbuch der Englischen Sprache (2d ed. 1878) of E. Müller; from the French Etymological Dictionaries of Brachet and Scheler; from Diefenbach's Gothic Dictionary; from the works of Morris and Trench; and from the well-known lectures of Max Müller. As final authorities in their respective languages, the following dictionaries have been used, Liddell and Scott's Greek Lexicon (6th ed.); Lewis and Short in Latin; and the Icelandic Dictionary of Cleasby and Vigfusson.

The **Appendix** contains a Glossary of the obsolete and rare words and meanings in Milton's poetical works; a copious list of Prefixes and Suffixes, with their signification, derivation, and affinities, as far as ascertained; a statement of Grimm's Law; and many useful lists.

The Publishers have only to add that this Dictionary owes its present form to an able staff, including the Rev. A. P. DAVIDSON, M.A., under the superintendence of the late Dr Andrew Findlater.

EXPLANATIONS TO THE STUDENT.

The Arrangement of the Words.—Every word is given in its alphabetical order. Each uncompounded verb has its participles, when irregular, placed after it. Exceptional plurals are also given. When a word stands after another, with no meaning given, its meanings can be at once formed from those of the latter, by adding the signification of the affix: thus the meanings of Darkness are obtained by prefixing the meaning of ness, state of being, to those of Dark.

The Pronunciation.—The Pronunciation is given immediately after each word, by the word being spelled anew. In this new spelling, every consonant used has its ordinary unvarying sound, no consonant being employed that has more than one sound. The same sounds are always represented by the same letters, no matter how varied their actual spelling in the language. No consonant used has any mark attached to it, with the one exception of th, which is printed in common letters when sounded as in thick, but in italics when sounded as in then. Unmarked vowels have always their short sounds, as in lad, led, lid, lot, but, book. The marked vowels are shown in the following line, which is printed at the bottom of each page—

fāte, fār; mē, hèr; mīne; mōte; mūte; mōon.

Where more than one pronunciation of a word is given, that which is placed first is more accepted.

The Spelling.—When more than one form of a word is given, that which is placed first is the more usual spelling.

The Meanings.—The current and most important meaning of a word is usually given first. But in some cases, as in Clerk, Livery, Marshal, where the force of the word can be made much clearer by tracing its history, the original meaning is first given, and the successive variations of its usage defined.

The Etymology.—The Etymology of each word is given after the meanings, within brackets. Where further information regarding a word is given elsewhere, it is so indicated by a reference. It must be noted under the etymology that whenever a word is printed thus: Ban, Base, the student is referred to it; also that the sign—is always to be read as meaning 'derived from.' Examples are generally given of words that are cognate or correspond to the English words; but it must be remembered that they are inserted merely for illustration. For instance, when an

EXPLANATIONS TO THE STUDENT.

English word is traced to its Anglo-Saxon form, and then a German word is given, no one should suppose that our English word is derived from the German. German and Anglo-Saxon are alike branches from a common Teutonic stem; and have seldom borrowed from each other. Under each word the force of the prefix is usually given, though not the affix. For fuller explanation in such cases, the student is referred to the list of Prefixes and Affixes in the Appendix.

** The student is recommended at once to master the following List of Abbreviations occurring in the work, which will be found to suggest their own meaning.

TABLE OF DIVISIONS OF THE ARYAN LANGUAGES.

THE English language—the offspring of the Anglo-Saxon—is one of the Low German dialects which form part of the Teutonic branch of the Indo-European or Aryan Languages.

The Aryan languages may be divided into six principal branches:

IV. Græco-Latin. V. TEUTONIC. PERSIC. CELTIC. SLAVONIC.

The Teutonic branch is divided into three classes, the Low German, High German, and Scandinavian :

The Celtic branch is divided into: L Gadhelic or Erse.

1. Irish.

2. Scottish Gaelic.

3. Manx.

1. Welsh. 2. Cornish (now extinct).

GRIMM'S LAW OF THE INTERCHANGE OF CONSONANT SOUNDS.

THE evidence that the group of languages known as the Aryan languages form a family that is, are all sister-dialects of one common mother-tongue—consists in their grammatical that is, are all sister-dialects of one common mother-tongue—consists in their grammatical forms being the same, and in their having a great many words in common. In judging whether an individual word in one of these tongues is really the same with a word in another of the tongues, we are no longer guided by mere similarity of sound; on the contrary, identity of sound is generally a presumption that a proposed etymology is wrong. Words are constantly undergoing change, and each language follows its own fashion in making those changes. Corresponding words, therefore, in the several languages must, as a rule, in the long course of ages have come to differ greatly; and these differences follow certain laws which it is possible to ascertain. Unless, then, a proposed identification accord with those laws it is inadmissible. We are not at liberty to posed identification accord with those laws, it is inadmissible. We are not at liberty to suppose any arbitrary omission of a letter, or substitution of one letter for another, as was the fashion in the old guessing school of etymology.

Of the laws of interchange of sounds in the Indo-European family, the most important is that known as Grimm's Law, so called after the famous German philologist who investigated it. It exhibits the relations found to exist between the consonant sounds in

three groups of the Aryan languages—namely, (1) the Classical, including Sanskrit, Greek, and Latin; (2) Low German, which we may take Gothic and English as representing;
(3) High German, especially Old High German, in which the Law is more consistently

carried out than in modern High German.

Grimm's Law of the Interchange of Consonant Sounds.

The scope of the Law is confined to the interchanges among the following consonant sounds, which are here arranged so as to show their relations to one another:

	Sharp.	Flat.	Aspirate.
Labial	p	ь	f (v)
Linguo-dental	t	· d	f (v) th (z) ch (h)
Guttural	k (c)	g	ch (h)

The horizontal division into three orders depends on the organ chiefly used in the utterance. The differences between the vertical series are more easily felt than described. Pronounce first ip and then ib; in the first, the lips are completely closed, and the sound or voice from the larynx abruptly cut off. In the second, the lips are also completely shut, but a muffled voice is continued for a moment; it is produced by the vocal cords being still kept in a state of tension, and the breath continuing to issue through them into the cavity of the mouth for a brief space after the lips are closed. Next pronounce if; in this, although the voice-sound abruptly ceases, the lip-aperture is not so completely closed but that a thin stream of breath continues to escape with the sound of a whisper. Hence the name aspirate given to such articulations. Now, interchanges do take place between members of these vertical series—that is, one sharp takes the place of another, as in Welsh pen, Gaelic kin; or in Russian Feodor for Theodore. Such instances, however, are comparatively rare and sporadic. It is between members of the horizontal orders that interchanges chiefly take place—that is, labials with labials, dentals with dentals, &c.; and it is with these interchanges that Grimm's Law deals.

The substance of the Law may be presented in a tabular form, as follows:

(1)	ClassicalSharp.	Flat.	Aspirate.
(2)	ClassicalSharp. Low GermanAspirate.	Sharp.	Flat.
(3)	High GermanFlat.	. Aspirate.	Sharp.

The table may be thus read: A classical sharp labial, as p, is represented in Low German by the aspirate labial f, and in High German by the flat labial b; and so of the other orders.
